telephone number, and said MS telephone number;
selecting said message at said MS;
calling from said MS said inbound telephone number attached to said selected
A
commt
message;
identifying said inbound telephone number of said call;
identifying said MS telephone number of said call; and
identifying said message associated with said inbound telephone number and
said MS telephone number, thereby identifying said message selection made at said
MS.

A2 8. (Once Amended) A method for outputting an underlying message based on the identification of an associated message, the method comprising the steps of:

creating an associated message identifying an underlying message;
uniquely associating an inbound telephone number with said associated
message;
attaching said inbound telephone number to said associated message;
sending said associated message and said attached inbound telephone number
to an MS using an MS telephone number associated with said MS;
maintaining a unique association between said underlying message, said
inbound telephone number, and said MS telephone number;
selecting said associated message at said MS;
calling from said MS said inbound telephone number attached to said selected
message;
identifying said inbound telephone number of said call;
identifying said MS telephone number of said call;
identifying said underlying message associated with said inbound telephone
